

Game Development

GAME MATHEMATICIAN

We are looking for a mathemagician to join our crew of passionate game creators.

You will be involved in creating and building casino games, from the initial embryo of an idea all the way to the final product.

You will be responsible for developing mathematical models of the games and for tweaking them to create the best gaming experience possible.

You will help transforming the mathematical model into a game, and assist in ensuring that the game follows the model exactly.

All applicants must be eligible to work in the EU.

Main Responsibilities:

- You will own the mathematical side of creating casino games, which includes;
- Coming up with ideas for games and discussing and moulding those as well as ideas from others.
- Creating mathematical models of the game ideas
- Tweaking and developing the models to improve the games further
- Communicating the models and assisting in converting them to proper, awesome games

Skills and Qualifications:

- Degree in Mathematics, at least a Bachelor's or equivalent
- Good grasp of probability theory and mathematical statistics
- Proficient in Java-programming
- Be able to work as part of a team as well as individually
- Fluent in English

We value:

- Solid interest in games in general, and casino games in particular
- Experience from the casino game industry.
